> Bank of Thailand Roof Top Renovation Project

Bank of Thailand Building 1, headquarter building office of Thailand's Central Bank, located on Samsen road, west side of Bangkok, where many historical building and government bureau are located.

Building 1, a 5-story headquarter building has been operating since 2009. Maintenance is needed so. LANKO was proudly selected as one of recommended supplier in waterproofing on rooftop.

The maintenance of rooftop was divided into 3 segments which are concrete roof, metal sheet roof and under roof area. Requirement for this renovation project is cement based and PU based waterproofing. LANKO K10 453 Polyurethane and LANKO K11 227 FLEXSHIELD was presented and selected as the solution for their requirement.

With the coordination of our technical consultant team and expert applicator, the building is successful waterproofed by LANKO.
