

Waterproofing Systems and Technical Solutions

Condominium Varandas Jardim do Lago - Limeira

FYP is a traditional builder, specialized in low income houses, in the countryside of the state of São Paulo.

Technical LANKO mortars were used to prepare the facades of 22 towers. LANKO 109 was applied on a 20 mm thickness layer directly over the concrete blocks, eliminating the traditional cementitious adherence bridge product. Over LANKO 109, it was applied a thin texturized layer of LANKO 108, just to receive the final acrylic paint finish. Gains on productivity, time and labor steps were the main benefits using LANKO's solutions.

- 22 towers with 7 floors each
- 2,300 m² of facade per tower.
- 50,600 m² of facade
