

Waterproofing Systems and Technical Solutions

Exequiel González Cortés Hospital

Located in the town of San Miguel, near Santiago.

Situated on a 31,000 m² site, the facilities include 52,000 m² of construction, including car parks, mechanical areas, exterior access points, and the main building.

The construction site is located in between two main arteries: the Gran Avenida José Miguel Carrera and Avenida Santa Rosa. It is also near Transantiago bus stops and a Metro stop (El Llano), located virtually right at the doors to the hospital.

Due to the high quality standards set for infrastructure, LANKO products were used. Particularly, in this case, 98 tonnes of LANKO 237 were used. This product does an excellent job of filling in holes in concrete as well as ensuring good sealing and adherence.
