> “Sant Oleguer” wastewater infrastructure

The layout of the Sant Oleguer collector passes under La Bassa, a recreational water park located in Sabadell (Barcelona). It is one of the largest swimming pools in Europe, with a 100 meter diameter glass and a depth of 1.80 meters in the deepest part.

- In January 2016, the closure of the equipment was made public due to safety reasons but also due to the damage and water leaks and to an important structural deficiencies of the collector, which could bring the pool to collapse.
- Before repairing the pool, the concrete collector was stabilized and repaired.
- The repair works for this wastewater infrastructure were as follows:
 - Sewn cracks with LANKO 534 EPOX MASILLA and LANKO 729 SCELFAST.
 - Consolidation and fissure injection with LANKO 737 REP FISSURE.
 - Anchorage of structural connectors with LANKO 729 SCELFAST.
 - Structural repair by projection with LANKO 736 CRETE RESEAUX.
