

Waterproofing Systems and Technical Solutions

Poitiers City

Starting from 2010 until end 2012, the city of Poitier launched a huge urban renovating program.

Loaded with history, the city of Poitiers required performant long lasting technologies mixed with a traditional/esthetic aspect.

PAREXLANKO's mortar were chosen these reasons.

Light yellow natural stones were used to brighten the roads of the city.

From downtown to small alleys, the entire road was paved over 3 000 sqm. To fit the bright colors of the stones, the 715 LANKOSTONE JOINTING MORTAR was specially formulated in light yellow color.

Since than, the city welcomes loads of tourists who can visit this magnificent historical city.
