

Waterproofing Systems and Technical Solutions

Granada Metro

The metropolitan area of Granada has been increased significantly its zone of influence in recent years, and represent more than thirty municipalities within a radius of 20 km with respect to the capital, where about half a million residents population.

The strengthening and diversification of public transport is presented as a primary need for easy connectivity of the main areas of Granada, decreasing the density of traffic generated mainly by the half million daily journeys.

The Granada Metro is a metropolitan railway with characteristics of light rail. The main area was built on surface, remaining an underground area through the city of Granada.

The LANKO PAVAGE system was applied in the Section 6 : Parque Tecnológico Ciencias de la Salud – Armilla. LANKO PAVAGE was the solution approved by the technical department of the owner to anchor the paving stones of the railway track. LANKO 711 was applied as a bedding mortar of the paving stone, and LANKO 715 to fill the joints.
