### > Hexham Low Energy Homes

Trivselshus homes have been setting standards in Sweden for more than two decades and are now being built in the UK by leading North East housebuilder Esh. These homes are thermally efficient, energy saving properties designed to achieve an Energy Performance Rating of category 'A', compared to the standard UK 'E' rating.

For a 16-home development at Hexham Gate on the outskirts of the Roman town of Hexham, Northumberland, the render system has been specified for the rendered elevations of the homes. These incorporate offsite manufactured Trivselshus panels which provide high levels of insulation to contribute towards the thermal performance of the homes.

Working on behalf of award-winning Esh Homes, specialist applicator B C Stewart Ltd, of Darlington, were responsible for the rendered sections of the homes on site, applying a PAREXDIRECT Acrylic render system.

Following application of a PAREXLANKO REVLANE + REGULATEUR primer, the top coat of PAREXLANKO REVLANE + IGNIFUGE TALOCHE FIN 1.5mm acrylic render was applied to provide visual appeal and weatherproof performance to the panel.

Esh is currently building Trivselshus homes at four locations in the North East and Cumbria.
