

> Tile Setting and Flooring Materials

> Ambassador Apartments, Deakin, ACT

This landmark apartment development, designed by prominent Canberra firm Colin Stewart Architects, is located in Canberra's inner-south suburb of Deakin. The complex consists of four buildings from five to seven storey's.

Professional Tiling Services were commissioned to do the tiling work which was carried out using Davco waterproofing, adhesive and grout products. K10 Rapid Class III waterproofing membrane was used for waterproofing of the bathrooms and showers. K10 Rapid is a fast drying, highly flexible, water-based polyurethane waterproofing membrane.

Large format tiles were used in the hallways and living areas of the complex, which required a strong tile adhesive. SE-7 tile adhesive is ideal for large tiles due to its non-horizontal slump. Econofix IP flexible tile adhesive was specifically used throughout the kitchens and bathrooms due to its excellent coverage.

Sanitized® Colorgrout was used for the grouting of the project. Sanitized® Colorgrout was the perfect choice because it could be used with the variety of tiles selected for the project and its wide range of colours.

APPLIED PRODUCTS

- Sanitized® Colorgrout

ALSO

- K10 Rapid Waterproofing Membrane
- Davelastic Adhesive Additive
- SE-7 Tile Adhesive
- Econofix IP Tile Adhesive
