

> Tile Setting and Flooring Materials

> Luxury Apartment Complex, Tuncurry, NSW

Davco products were used extensively throughout the construction of one of the NSW North Coast's most spectacular apartment buildings, the Sunrise Apartments at Tuncurry near Forster.

The design criteria called for quality products to be used throughout. Davco adhesives, waterproofing membranes and grouts were therefore an obvious choice.

Dampfast, a 2 part cementitious waterproofing membrane, was chosen for the 1,200 square metres of balconies. Dampfast was also chosen for the swimming pool and water features throughout the complex.

All internal wet areas in the luxury apartments, such as bathrooms and showers, were waterproofed with K10 Plus - a water based polyurethane waterproofing membrane.

For the tiling of the balconies and other areas around the Sunrise Apartments, Ultraflex was specified and supplied by KI Tiles of Forster, proving to be an effective and easy to use tile adhesive.

Sanitized® Colorgrout was also supplied by KI Tiles for the Sunrise Apartments. Used for the grouting of the entire project.

APPLIED PRODUCTS

- Ultraflex

ALSO

- Dampfast Waterproofing Membrane
- K10 Plus Waterproofing Membrane
- Sanitized® Colorgrout
