

## ➤ Tile Setting and Flooring Materials

### ➤ Antofagasta Hospital

The new Dr Leonardo Guzmán Antofagasta Regional Hospital aims to be the best in Chile with its 123,000 m<sup>2</sup>, including 45 consultation cubicles, 24 emergency cubicles, 16 dental stations, 18 wards, and 671 beds. All of this is for the benefit of a population of 260,000 people, with a considerable increase in the availability of beds in the region, as well as advanced medical equipment and hospital infrastructure.

Given the hospital's high quality standards for infrastructure, the wide range of Cadina Adhesives was used—mainly products with anti-microbial characteristics (270 tonnes of product) to apply ceramic tiles to the floor. Finishing with fluid grout.

#### APPLIED PRODUCTS

- Cadina Adhesivo Polvo AC

#### ALSO

- Cadina Antibacterial Grueso
