

Waterproofing Systems and Technical Solutions

Pomi jobsite

The project consisted in the refurbishment of an old structure to set a new hospital.

The contractor had to face to a lack of structural resistance of the existing structure. They had to found a technical solution which will allow them to reuse the existing structure and not to destroy it. The existing structure presented also corroded rebar.

The LANKO REP 731 was the solution proposed by PAREX Paraguay. The right product solution for the issue that they had.

A high quantity of this product was used in this jobsite and the customer was fully satisfied with the results.

It allows us to introduce others products like waterproofing solution with LANKO 228.
