➤ Hampton Garden

The project is the correction and finishing of the interior and exterior walls of the Hampton Gardens using the LANKO 101 PARENDUIT. The skim coating system ensures the stability and high bonding of the paint to the substrate for the walls of the condominium. Main consideration for using the LANKO 101 is its quality and cost effective benefits due to savings on materials, labor cost and time.

The project is located in Pasig City, considered as one of the highly populated and progressive cities in the Philippines. Targeted clients of the project are working people who value convenience and quality living. These are usually those who have less time to check or maintain their units, the main reason why it is important to use quality products that will minimize the renovation or repair costs.

In using the LANKO 101 PARENDUIT Skimcoating system, the project eliminated the use of the conventional painting materials like neutralizers, primers and putty. LANKO 101 PARENDUIT was applied in substrates with various conditions like rubbed concrete, precast, and cast in place. Minor imperfections are also eliminated like grooves, seams, air pockets, and unevenness of concrete.

— APPLIED PRODUCT —

- LANKO 101 USED FOR INTERIOR AND EXTERIOR WALLS

— TECHNICAL DETAILS —

- Surface : 40,000 m²
- Volume : 1,000 pails of LANKO 101 PARENDUIT
