

Waterproofing Systems and Technical Solutions

The Brownstone

Inspired by the rustic charm of New York Brownstone houses in the contemporary context, where a complete atmosphere for lifestyle living, play and recreation comes together. It's architecture language with its straight lines and rustic expression stands out immediately among the matured neighbourhood.

The Brownstone is PAREX Singapore's first Prefabricated Prefinished Volumetric Construction (PPVC) concrete modular project. These modular units are fabricated in a factory and transported to site for installation.
